

## Course Syllabus: Secure Computer Systems

(CS 6238)

Summer 2020, Section 001, OCY	OMS Computer Science and OMS Cybersecurity, School of Computer Science, College of Computing
<b>Delivery:</b> 100% Web-Based, Asynchronous	Canvas and EdX for content delivery
<b>Dates course will run:</b> May 11, 2020 – July 30, 2020	

### Instructor Information

Professor Mustaque Ahamad	Office: Coda E0970B
Office Phone: 404-894-2593	Email: <a href="mailto:mustaq@cc.gatech.edu">mustaq@cc.gatech.edu</a>
Weekly Office Hours via Blue Jeans: Wednesdays, 2-3PM	Teaching Assistants: Rahul Saranjame <a href="mailto:rsaranjame@gatech.edu">rsaranjame@gatech.edu</a> Maneel Modi <a href="mailto:maneelmodi@gatech.edu">maneelmodi@gatech.edu</a> Javier Rodriguez <a href="mailto:jrodriguez326@gatech.edu">jrodriguez326@gatech.edu</a> Teaching assistant office hours: TBA

### General Course Information

#### Description

Applications and services are supported by software platforms such as operating systems and databases. Secure execution of such applications depends on the trust assumptions that can be made about these systems. By providing right mechanisms for protecting sensitive information and other resources, operating systems and databases can facilitate the development of secure applications. A uniform approach for exploring security support in operating systems and databases is attractive because both types of systems must offer similar mechanisms to mediate access to protected information. This course will take such an approach and it will explore problems such as authentication and access control that are traditionally handled at the system level. Students will also gain in depth understanding of the implementations of mechanisms that address these problems and security policies that can be supported by them. System level security issues in distributed systems will be covered as well.

#### Pre- &/or Co-Requisites

- An undergraduate operating systems course (Georgia Tech's course CS 3210 Design of Operating Systems or equivalent).
- System programming experience with the C programming language is highly desirable.
- Programming experience with Python.

#### Course Goals and Learning Outcomes

After completing the course, the students should have the following capabilities:

- Demonstrate the need for a trusted computing base (TCB) and how it helps protect resources in a computer system.
- Analyze how hardware supported memory protection enables isolation of TCB and of untrusted programs.
- Develop, implement and evaluate authentication and access control in computer systems.
- Understand and evaluate security in distributed systems.
- Apply security concepts to protect data stored in database systems.
- Be familiar with recent research related to topics covered in class.

# Georgia Institute of Technology

## Course Syllabus: Secure Computer Systems

(CS 6238)

### Course Materials

#### Course Text

None. Research papers and other required/recommended readings will be available online.

#### Required Readings

Papers will be assigned for topics covered in each week.

#### Course Website and Other Classroom Management Tools

This class will use Canvas and edX to deliver course materials to online students. ALL course materials and activities will take place on these two platforms.

### Course Requirements, Assignments & Grading

#### Assignment Distribution and Grading Scale

Assignment	Release Date	Due Date	Weight
<b>Quizzes: One quiz with the lowest score will be dropped.</b>			<b>30 %</b>
Quiz 1	May 11	May 17	2.5%
Quiz 2	May 11	May 17	2.5%
Quiz 3	May 18	May 24	2.5%
Quiz 4	May 18	May 24	2.5%
Quiz 5	May 25	May 31	2.5%
Quiz 6	June 1	June 7	2.5%
Quiz 7	June 8	June 14	2.5%
Quiz 8	June 22	June 28	2.5%
Quiz 9	June 22	June 28	2.5%
Quiz 10	June 29	July 5	2.5%
Quiz 11	July 6	July 12	2.5%
Quiz 12	July 13	July 19	2.5%
Quiz 13	July 13	July 19	2.5%
<b>Programming Projects (Two best of first three and project IV)</b>			<b>20%</b>
Project I: Memory Protection	May 11	May 31	5%
Project II: Authentication	May 25	June 14	5%

## Course Syllabus: Secure Computer Systems

(CS 6238)

Assignment	Release Date	Due Date	Weight
Project III: Access Control	June 1	June 28	5%
Project IV: Distributed Systems Security	June 1	July 19	10%
<b>Exams</b>			<b>50%</b>
Midterm Exam	June 15	June 21	25%
Final Exam	July 20	July 26	25%

### Grading Scale

Your final grade will be assigned as a letter grade. To receive an A, a student must demonstrate mastery of the course topics. Typically, students who have an overall score at least 0.5 standard deviation higher than the class average will receive an A. Those students who have overall mean well below the class average will receive a C (more than one standard deviation below class average). Students who do not complete work, perform poorly on most assessment components and have overall score more than two standard deviations below the class average may be assigned an F.

### Description of Graded Components

#### Quizzes

The course will have 13 quizzes and each quiz will be available during the week when the quiz module/topic is scheduled. Once a quiz is released (on a Monday unless it is a holiday), it will be available until the following Sunday when it closes. Each quiz has a time limit of 20 minutes and students will have **one** attempt only. Quiz questions will either be T/F or multiple choice. If you fail to take a quiz before it closes, you lose the points. Quizzes are individual assignments and are intended to test concepts from lectures and assigned reading.

#### Programming Projects

The course will have 4 programming projects designed to reinforce the concepts covered with hands-on implementations.

#### Exams

The course will have two online subjective exams: A midterm and a final. Both exams will be **closed book, closed notes** and students will be required to type their answers in a text box. Once an exam is released, it will be available for a week before it is due. Students will have **one** attempt only with a time limit of 2 hours. Exams are individual assignments and are intended to test deeper understanding of the topics covered in lectures and assigned reading. The final exam will include **only** topics covered after the midterm.

### Completing Quizzes and Exams and Submitting Projects

Quizzes and exams will only be available during the period specified above. Since all quizzes are due on Sundays, they must be completed by 11:55PM ET on Sunday night. Each project will have details of the files/documents that need to be submitted. Again, these should be submitted by 11:55PM ET on the day they are due.

# Georgia Institute of Technology

## Course Syllabus: Secure Computer Systems

(CS 6238)

Sending assignments (projects etc.), whether early, on time, or late to the professors is not permitted and will not be accepted. All projects must be completed and submitted within Canvas. If there are technical issues, please notify the help desk, as well as the professor immediately.

### Assignment Due Dates

All assignments will be due at the listed times listed. These times are subject to change so please check back often. Please convert from UTC to your local time zone using a [Time Zone Converter](#).

### Late and Make-up Work Policy

#### Timing Policy

- The modules follow a logical sequence that includes knowledge and experience-building. It is important that work assigned for a module be completed in a timely manner to facilitate learning in upcoming modules.
- Assignments should be completed by their due dates. Late submissions will not be accepted. The only extenuating circumstances that will be accommodated are those that literally incapacitate the student for a significant period of time, such as injury and hospitalization, floods, hurricanes, power outages for several days, etc. Please do not waste the instructors' time asking for extensions for any other reasons.

### Grading and Feedback

Quizzes will be auto-graded. Explanations for correct answers will be provided after a quiz closes. Projects and exams will be graded and returned within two weeks after the submission date.

## Technology Requirements and Skills

### Computer Hardware and Software

- High-speed Internet connection
- Laptop or desktop computer with a **minimum** of a 2 GHz processor and 4 GB of RAM
- Windows for PC computers OR Mac iOS for Apple computers
- Complete Microsoft Office Suite or comparable and ability to use Adobe PDF software (install, download, open and convert)
- Linux operating systems familiarity, including how system calls are used
- Virtualization software such as VirtualBox and ability to create and launch virtual machines
- Software development, compiling and debugging tools as required

### Technology Help Guidelines

**30-Minute Rule:** When you encounter struggles with technology, give yourself 30 minutes to 'figure it out.' If you cannot, then post a message to the discussion board; your peers may have suggestions to assist you. You are also directed to contact the Helpdesk 24/7.

When posting or sending email requesting help with technology issues, whether to the Helpdesk, message board, or me use the following guidelines:

- Include a descriptive title for the subject field that includes 1) the name of course 2) the issue. Do NOT just simply type "Help" into the subject field or leave it blank.
- List the steps or describe the circumstance that preceded the technical issue or error. Include the exact wording of the error message.
- When possible, always include a screenshot(s) demonstrating the technical issue or error message.

## Course Syllabus: Secure Computer Systems

(CS 6238)

- Also include what you have already tried to remedy the issue (rebooting, trying a different browser, etc.).

### Course Policies, Expectations & Guidelines

#### Communication Policy

- Email course questions and personal concerns, including grading questions, to the instructor privately. Do NOT submit posts of a personal nature to the discussion board unless it is a private post on Piazza.
- Email will be checked at least once per day, Monday through Friday. On Saturday and Sunday, email may be checked but there is no guarantee. During the week, I will respond to all emails within 24 hours; on weekends and holidays, allow up to 48 hours. If there are special circumstances that will delay my response, I will make an announcement to the class.
- Student Forum/Q&A discussion boards will be checked twice per day Monday through Friday; Saturday and Sunday, these discussion boards will be checked once per day.
- Virtual office hours will be held using the Bluejeans. I will hold Virtual Office Hours every Tuesday from 3-4pm. Also, special office hours may be announced before exams. Such office hours will be announced in advance.

#### Online Student Conduct and (N)etiquette

Communicating appropriately in the online classroom can be challenging. In order to minimize this challenge, it is important to remember several points of “**internet etiquette**” that will smooth communication for both students and instructors:

1. Read first, Write later. Read the ENTIRE set of posts/comments on a discussion board before posting your reply, in order to prevent repeating commentary or asking questions that have already been answered.
2. Avoid language that may come across as strong or offensive. Language can be easily misinterpreted in written electronic communication. Review email and discussion board posts BEFORE submitting. Humor and sarcasm may be easily misinterpreted by your reader(s). Try to be as matter-of-fact and professional as possible.
3. Follow the language rules of the Internet. Do not write using all capital letters, because it will appear as shouting. Also, the use of emoticons can be helpful when used to convey nonverbal feelings.
4. Consider the privacy of others. Ask permission prior to giving out a classmate's email address or other information.
5. Keep attachments small. If it is necessary to send pictures, change the size to an acceptable 250kb or less (one free, web-based tool to try is [picresize.com](http://picresize.com)).
6. No inappropriate material. Do not forward virus warnings, chain letters, jokes, etc. to classmates or instructors. The sharing of pornographic material is forbidden.

**NOTE:** The instructor reserves the right to remove posts that are not collegial in nature and/or do not meet the Online Student Conduct and Etiquette guidelines listed above.

#### University Use of Electronic Email

A university-assigned student e-mail account is the official university means of communication with all students at Georgia Institute of Technology. Students are responsible for all information sent to them via their university-assigned e-mail account. If a student chooses to forward information in their university e-mail account, he or she is responsible for all information, including attachments, sent to any other e-mail account. To stay current with university information, students are expected to check their official university e-mail account and other electronic communications on a frequent and

# Georgia Institute of Technology

## Course Syllabus: Secure Computer Systems

(CS 6238)

consistent basis. Recognizing that some communications may be time-critical, the university recommends that electronic communications be checked minimally twice a week.

**Plagiarism & Academic Integrity** Georgia Tech aims to cultivate a community based on trust, academic integrity, and honor. Students are expected to act according to the highest ethical standards. All students enrolled at Georgia Tech, and all its campuses, are to perform their academic work according to standards set by faculty members, departments, schools and colleges of the university; and cheating and plagiarism constitute fraudulent misrepresentation for which no credit can be given and for which appropriate sanctions are warranted and will be applied. For information on Georgia Tech's Academic Honor Code, please visit <http://www.catalog.gatech.edu/policies/honor-code/> or <http://www.catalog.gatech.edu/rules/18/>.

Any student suspected of cheating or plagiarizing on a quiz, exam, or assignment will be reported to the Office of Student Integrity, who will investigate the incident and identify the appropriate penalty for violations.

Because similar projects could be assigned in future offering of the course, please do not make class projects, quiz and exam questions, and your solutions available at a public repository.

### Copyright

The course readings include research papers that are available in the public domain or via the Georgia Tech library. As specified by publishers' copyright notices, the papers will be for individual use only. Similarly, course materials such as quiz and exam questions and project descriptions are for your use only and should not be published or disseminated.

### Accommodations for Students with Disabilities

If you are a student with learning needs that require special accommodation, contact the Office of Disability Services at (404)894-2563 or <http://disabilityservices.gatech.edu/>, as soon as possible, to make an appointment to discuss your special needs and to obtain an accommodations letter. Please also e-mail me as soon as possible in order to set up a time to discuss your learning needs.

### Collaboration & Group Work

You are encouraged to form virtual groups to discuss topics covered in class. Such discussion can enhance learning and could include clarifications of questions related to a topic or a project. However, individual work that you submit as part of an assessment and claim as yours must be yours.

All work for this class is to be done individually. You are strongly urged to familiarize yourself with the **GT Student Honor Code (Links to an external site.)** rules. Specifically, the following is not allowed:

- Copying, with or without modification, someone else's work when this work is not meant to be publicly accessible (*e.g., a classmate's program or solution*).
- Submission of material that is wholly or substantially identical to that created or published by another person or persons, without adequate credit notations indicating authorship (*plagiarism*).
- Putting your projects on public Github. If a student in the future copies your code/reports, the student obviously violates the honor code but you will also be responsible for the violation.

Any public material that you use (*open-source software, help from a text, or substantial help from a friend, etc...*) should be acknowledged explicitly in anything you submit. If you have any doubt about whether something is allowed or not, please do check with the class Instructor or the TA.

## Course Syllabus: Secure Computer Systems

(CS 6238)

### Extensions, Late Assignments, & Re-Scheduled/Missed Exams

Each quiz, exam and project will be open for at least one week. Because of this, no extensions will be granted, and late assignments will not be accepted. Please do not email your projects to the instructor or TAs after they close on Canvas.

### Student-Faculty Expectations Agreement

At Georgia Tech we believe that it is important to strive for an atmosphere of mutual respect, acknowledgement, and responsibility between faculty members and the student body. See <http://www.catalog.gatech.edu/rules/22/> for an articulation of some basic expectation that you can have of me and that I have of you. In the end, simple respect for knowledge, hard work, and cordial interactions will help build the environment we seek. Therefore, I encourage you to remain committed to the ideals of Georgia Tech while in this class.

### Subject to Change Statement

The syllabus and course schedule may be subject to change. Changes will be communicated via the Canvas announcement tool and/edX bulk email and or the class Piazza discussion forum. It is the responsibility of students to stay current.

### Course Schedule

Week/Dates	Module/Topic	Deliverables	Readings
Week 1 May 11 - 17	Module 1: Getting started: Course Introduction	Quiz 1	<ul style="list-style-type: none"> <li>• <a href="#">The Security Mindset</a></li> <li>• <a href="#">Reflections on Trusting Trust</a></li> <li>• <a href="#">Chapter 1 of "Building a Secure Computer System" by Morrie Gasser</a></li> <li>• <a href="#">Trusted Platform Module</a></li> <li>• <a href="#">Trusted Computing Systems Evaluation Criterion</a></li> </ul>
Week 1 May 11 - 17	Module 2: Design Principles for Secure Systems	Quiz 2	<ul style="list-style-type: none"> <li>• <a href="#">The Protection of Information in Computer Systems</a></li> <li>• Chapter 5 of Morrie Gasser book</li> </ul>
Week 2 May 18 - 24	Module 3: Hardware Support for Protection of Resources	Quiz 3	<ul style="list-style-type: none"> <li>• Chapter 5: <a href="#">Intel Architectures Software Developer Manual</a></li> <li>• <a href="#">Flipping Bits in Memory Without Accessing Them: An Experimental Study of DRAM Disturbance Errors</a></li> <li>• <a href="#">Project Zero</a></li> </ul>
Week 2 May 18 - 24	Module 4: Virtualization and Security	Quiz 4	<ul style="list-style-type: none"> <li>• Background Reading: <a href="#">Xen and Art of Virtualization</a></li> <li>• <a href="#">Analysis of Intel Pentium for Supporting Virtualization</a></li> <li>• Chapters 23 and 24: <a href="#">Intel Architectures Software Developer Manual</a></li> <li>• <a href="#">Ether: Malware Analysis with Hardware Virtualization</a></li> </ul>
Week 3 May 25 - 31	Module 5: Authentication	Quiz 5 Programming Project I Due	<ul style="list-style-type: none"> <li>• <a href="#">Password hardening based on keystroke dynamics</a></li> <li>• <a href="#">Chip and PIN is broken</a></li> <li>• <a href="#">Targeted Online Password Guessing: An Underestimated Threat</a></li> <li>• <a href="#">Password managers: attacks and defenses</a></li> </ul>
Week 4 June 1 - 7	Module 6: Discretionary Access Control	Quiz 6	<ul style="list-style-type: none"> <li>• <a href="#">Protection</a></li> <li>• Access Control Lists: <a href="#">Unix</a> , <a href="#">Windows</a></li> </ul>

# Georgia Institute of Technology

## Course Syllabus: Secure Computer Systems

(CS 6238)

Week/Dates	Module/Topic	Deliverables	Readings
			<ul style="list-style-type: none"> <li>• <a href="#">Going beyond the sandbox: new security architectures in JDK 1.2</a></li> <li>• Capability-based systems: <a href="#">Hydra</a></li> <li>• <a href="#">Setuid demystified</a></li> </ul>
Week 5 June 8 -14	Module 7: Mandatory Access Control	Quiz 7 Programming Project II Due	<ul style="list-style-type: none"> <li>• Chapter 6 of Morrie Gasser book (Also read the original <a href="#">BLP report</a>)</li> <li>• <a href="#">Clark-Wilson Commercial MAC Policy</a></li> <li>• <a href="#">Role-based access control</a></li> </ul>
Week 6 June 15 - 21	Module 8: Review for Midterm Exam & Midterm Exam	Midterm Exam	Readings from weeks 1 - 5
Week 7 June 22 - 28	Module 9: Mandatory Access Control in SELinux	Quiz 8 Programming Project III Due	<ul style="list-style-type: none"> <li>• <a href="#">Research papers</a> that led to the development of SELinux. They are not required reading for the course.</li> </ul>
Week 7 June 22 - 28	Module 10: Covert Channels	Quiz 9	<ul style="list-style-type: none"> <li>• <a href="#">A note on the confinement problem</a></li> <li>• <a href="#">Guide to covert channel analysis</a></li> <li>• <a href="#">Pump: A decade of covert fun</a></li> <li>• <a href="#">Project zero blog post on meltdown and spectre</a></li> </ul>
Week 8 June 29 – 5	Module 11: Distributed Systems Security – Basics	Quiz 10	<ul style="list-style-type: none"> <li>• <a href="#">Authentication in Distributed Systems: Theory and Practice</a></li> </ul>
Week 9 July 6 – 12	Module 12: Distributed Systems Security – Putting it All Together	Quiz 11	<ul style="list-style-type: none"> <li>• <a href="#">Authentication in Distributed Systems: Theory and Practice</a></li> <li>• <a href="#">SGX: End-to-end remote attestation</a></li> <li>• <a href="#">Distributed Systems Security with Information Flow Control</a></li> </ul>
Week 10 July 13 - 19	Module 13: Database Security – Basics, Inference Attacks & Data Privacy	Quiz 12	<ul style="list-style-type: none"> <li>• <a href="#">An authorization mechanism for relational databases</a></li> <li>• <a href="#">Security-control methods for statistical databases</a></li> <li>• <a href="#">Data privacy and k-anonymity</a></li> <li>• <a href="#">Differential Privacy: A Survey of Results</a></li> </ul>
Week 10 July 13 - 19	Module 14: Database Security – Multi-Level Secure Databases	Quiz 13 Programming Project IV Due	<ul style="list-style-type: none"> <li>• <a href="#">The Seaview Security Model</a></li> </ul>
Week 11 July 20 - 26	Module 15: Course Summary and Final Exam Review	Final Exam	Readings from weeks 7 - 11
